DETAILED ACTION

Election/Restrictions

1. Claims 7-17 and 20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a non-elected method, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 6.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by the Japanese patent 404152676.

Regarding claim 1, the Japanese patent discloses, figure 1(g), a thin film transistor containing an active layer 1-7 having a convex portion, as can be seen by the enclosed lines of the active layer, in a channel forming region below the gate region 1-11.

Regarding claim 2 and 3, the Japanese patent discloses the number of grain boundaries existing in the channel region is limited to one (see the abstract, lines 5-6)

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over the Japanese patent, as applied to claims 1-3 above, and further in view of Shimizu et al. (U.S. 6188085).

The Japanese patent does not disclosed the thin film transistor is incorporated in to electronic devices such as camera. Shimizu discloses a thin film transistor with crystal grains of great grain size with improved electric characteristics. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to use the thin film transistor in devices such as cameras so those devices have electrical components with improved electric characteristics.
